## **DETAILED ACTION**

### ***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance per MPEP 1302
  2. The claims in the application are deemed to be directed to a non-obvious improvement over Arai et al (US patent number 5800147).
  3. Claim 2 is directed to a reciprocating compressor having a plurality of cylinders and a structure that helps to dampen pulsation. A plurality of delivery passages and delivery chambers are formed in the cylinder block and one of the delivery passages communicates the outlet port with an external circuit while the other delivery passage does not communicate with the outlet port but instead communicates via a guide passage with the other delivery passage which communicates with the outlet port. Also the delivery passage in communication with the outlet port is formed at a position higher than the other delivery passage and communicates via an orifice (for pulsation damping) with at least one of the delivery chambers. In addition the dimensions of the orifice are set to as to achieve an area equal to or less than an area of a circular crossection with a diameter of 1.5mm.Choosing such dimension as shown in figure 11 and 14 indicate a marked pulsation reduction while preventing oil loss .
- Arai et al teaches a similar compressor with pulsation reducing capabilities.The compressor of Arai et al includes a plurality of delivery passages and delivery chambers are formed in the cylinder block both delivery passages communicates joined together at a common point and communicate via a guide passage to the outlet port with an external circuit..Thus,Arai does not teach a delivery passage in communication with the

Art Unit: 3746

outlet port that is formed at a position higher than another delivery passage and most importantly doesn't disclose or teach a pulsation damping orifice (having a specific diameter of 1.5 mm or less) installed between the delivery passage in communication with the outlet port and one of the delivery chambers.

Thus In the examiner's opinion, it would not have been obvious to a person of ordinary skill in the art to rearrange the pulsation damping system of Arai et al by providing one delivery passage ( the only passage that communicates with the outlet port) which is positioned higher than another delivery passage (that does not communicate with the outlet port ) and at the same time providing a constriction orifice having a specified diameter of 1.5mm between the delivery chamber and the delivery passage that communicates with the outlet port.

4. Claims 7 and 8 are directed to the same invention discussed in claim 2 above but differ only in the location of the constricted portion. Claim 7 recites that the orifice is formed at cylinder block and claim 8 recite that the orifice is formed as a gap between cylinder block and a valve or a gasket disposed between cylinder block and a valve plate. Since Arai as discussed in claim 2 above does not teach a constricted orifice for pulsation damping the reason of allowance given for claim 2 holds true and will not be repeated to avoid redundancy.

### ***Conclusion***

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 3746

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
